

Protecting Montana's wildlife, land, waters, and hunting & fishing heritage for future generations.

Board Resolution on the importance of science-based climate change policy to the management of Montana's wildlife and fish

Whereas global climate change is widely accepted by the scientific community and the broader public;

Whereas global climate change is an existential threat to life as we know it in the decades ahead;

Whereas a broad range of commitments to address the threats of climate change have been made by governments, corporations, nonprofits, and other organizations around the world;

Whereas the actions needed are sweeping in scope, time critical, expensive, and controversial; and

Whereas citizen engagement is essential to motivate government at all levels to address climate change scientifically and timely; now, therefore, be it resolved that the Montana Wildlife Federation (MWF):

1. Urges all levels of government to timely address climate change with science-based solutions.
2. Urges all levels of government to educate the public about the causes and threats of climate change.
3. Urges all levels of government to educate the public about solutions to climate change.
